# Measurement and Control of Chemical, Food and Biotechnological Processes

*Editors: Karel Kadlec, Miloš Kmínek, Pavel Kadlec*

STC Science Centre Ltd., London, KEY Publishing Ostrava (2019)

## CONTENT

### Volume I Process Measurement

#### Summary Volume I

#### Preface to Volume I

### Part I Introduction to the Measurement and Control of Technological Processes

- 1 An Introduction to Measurement and Control** (*Karel Kadlec, Jiří Macháček*)
  - 1.1 Measurement and Control Tasks – Basic Terminology and Labelling
    - 1.1.1 Measurement and Control Tasks
    - 1.1.2 Basic Terms from Measurement and Control
    - 1.1.3 Principles of Block Diagrams Drawing
    - 1.1.4 Labelling of Measurement and Control Loops in Technological Diagrams
  - 1.2 Process Measurement Instruments and Their Properties
    - 1.2.1 Process Measuring Instruments
    - 1.2.2 Classification of Sensors
    - 1.2.3 Sensors, Transducers, Transmitters
    - 1.2.4 Dataloggers of Measured Values
    - 1.2.5 Smart Sensors and Smart Transmitters
    - 1.2.6 Wireless Sensors
    - 1.2.7 Equipment for Explosive Atmospheres (ATEX)
    - 1.2.8 Virtual Instrumentation
    - 1.2.9 Characteristic Properties of Measuring Instruments
  - 1.3 Measurement Uncertainties
    - 1.3.1 Basic Principles and Guidelines
    - 1.3.2 Calculating Standard Uncertainties
      - 1.3.2.1 Calculating Standard Uncertainties from Data Obtained by Direct Measurement Method
      - 1.3.2.2 Standard Uncertainty Determination from a Single Quantity Indirect Measurement
      - 1.3.2.3 Determination of Expanded Uncertainties
      - 1.3.2.4 General Guidelines How to Express Uncertainty
      - 1.3.2.5 Supplementary Information about Uncertainties
  - 1.4 Checking the Measurement and Calibration Sensors Accuracy
- 2 Measurement and Computer Data Acquisition** (*Dušan Kopecký, Karel Kadlec*)
  - 2.1 Internet of Things and Industry 4.0
  - 2.2 Computers for Information and Industrial Networks
  - 2.3 Communication in Industrial and Information Networks
    - 2.3.1 ISO/OSI Reference Model
    - 2.3.2 Bus Main Features
      - 2.3.2.1 Bus Definition and Basic Terminology
      - 2.3.2.2 Bus Wiring Scheme
      - 2.3.2.3 Data Transfer Rate
      - 2.3.2.4 Coding for Data Transmission
    - 2.3.3 Buses in Personal Computers
      - 2.3.3.1 Standard RS-232C (Serial Port)
      - 2.3.3.2 Universal Serial Bus (USB)

- 2.3.3.3 Peripheral Component Interconnect (PCI) Bus
- 2.3.3.4 Peripheral Component Interconnect Express (PCI Express) Bus
- 2.3.3.5 Ethernet
- 2.3.3.6 Wireless Standard IEEE 802.11 (Wi-Fi)
- 2.3.3.7 Bluetooth Wireless Standard
- 2.3.4 Buses for Networks in Industrial Automation
  - 2.3.4.1 RS-422, RS-423 and RS-485 Standards
  - 2.3.4.2 Controller Area Network (CAN)
  - 2.3.4.3 DeviceNet Network
  - 2.3.4.4 General Purpose Interface Bus (GPIB)
  - 2.3.4.5 Meter-Bus (M-Bus)
  - 2.3.4.6 Process Field Bus (Profibus)
  - 2.3.4.7 Wireless Meter-Bus (Wireless M-Bus)
  - 2.3.4.8 Wireless Standard IEEE 802.15.4 and ZigBee
- 2.3.5 Industrial *Ethernet*
- 2.3.6 Current Loop
- 2.3.7 HART Communication Protocol
- 2.3.8 IO-Link Communication Protocol
- 2.3.9 JUMO digiLine
- 2.3.10 Industrial Interface Converters
- 2.4 Multifunctional Data Acquisition Systems
  - 2.4.1 Multifunctional Data Acquisition Cards and Boards
  - 2.4.2 Modular Systems for Data Acquisition
- 2.5 Data Acquisition and Processing Software
  - 2.5.1 Operating Systems
  - 2.5.2 Drivers and Software
  - 2.5.3 Integrated Development Environments
- 2.6 Conclusion

## **Part II Measurement of Process Variables**

- 3 Temperature Measurement** (*Karel Kadlec*)
  - 3.1 Contact Temperature Sensors
    - 3.1.1 Thermal Expansion Thermometers
    - 3.1.2 Thermocouples
      - 3.1.2.1 Measuring Circuits in Thermocouples
    - 3.1.3 Resistance Temperature Detectors (RTDs)
      - 3.1.3.1 Metal Resistance Temperature Detectors
      - 3.1.3.2 Semiconductor Temperature Sensors
      - 3.1.3.3 Measurement Circuits for Signal Evaluation in Resistance Thermometers
    - 3.1.4 Signal Processing of Electrical Thermometers
    - 3.1.5 Installing Contact Thermometers
    - 3.1.6 Calibration of Contact Thermometers
  - 3.2 Special Thermometers
  - 3.3 Non-Contact Thermometers
    - 3.3.1 Basic Theoretical Principles of Non-Contact Thermometry
    - 3.3.2 Arrangement of IR Thermometers and IR Cameras
      - 3.3.2.1 Non-Contact Thermometers
      - 3.3.2.2 Optical System in Non-Contact Thermometers
      - 3.3.2.3 Influences Affecting the Measurement with Non-Contact Thermometers
    - 3.3.3 Thermal Imaging Cameras and Infrared Thermography
      - 3.3.3.1 Thermal Imaging Cameras
      - 3.3.3.2 Thermographic Measurement
      - 3.3.3.3 Thermogram and Its Evaluation
    - 3.3.4 Calibration of Non-Contact Thermometers

- 3.3.5 Applications of Non-Contact Thermometers
- 4 Pressure measurement** (*Karel Kadlec*)
  - 4.1 Hydrostatic Manometers
  - 4.2 Piston Pressure Gauges, Deadweight Testers
  - 4.3 Mechanical Pressure Gauges with Flexible Elements
  - 4.4 Electronic Pressure Transmitters
    - 4.4.1 Conversion of the Mechanical Quantity (Displacement) into an Electrical Signal
    - 4.4.2 Potentiometric and Inductive Displacement Sensors
    - 4.4.3 Capacitive Pressure Sensors
      - 4.4.3.1 Principle of the Capacitive Pressure Sensor
      - 4.4.3.2 Ceramic Diaphragm
      - 4.4.3.3 Transmitters with Capacitive Sensors
    - 4.4.4 Pressure Transducers with Resistance Strain Gauges
      - 4.4.4.1 Principle of Resistance Strain Gauges
      - 4.4.4.2 Transmitters with Semiconductor Strain Gauges
      - 4.4.4.3 Process Transmitters with Piezoresistors
    - 4.4.5 Piezoelectric Pressure Sensors
      - 4.4.5.1 Piezoelectric Effect
      - 4.4.5.2 Piezoelectric Pressure Sensor Construction
    - 4.4.6 Resonant Pressure Sensors
      - 4.4.6.1 The Principle of Resonant Pressure Sensors
      - 4.4.6.2 Micromechanical Resonant Pressure Sensor
    - 4.4.7 Smart Pressure Transmitters
    - 4.4.8 Electronic High Pressure and Vacuum Gauges
  - 4.5 Installation of Process Pressure Gauges
  - 4.6 Calibration of Process Pressure Gauges
  - 4.7 Selection of a Suitable Pressure Sensor
- 5 Level Measurement** (*Karel Kadlec*)
  - 5.1 Mechanical Level Sensor
    - 5.1.1 Simple Mechanical Level Gauges
    - 5.1.2 Weight-Based Level Measurements
    - 5.1.3 Float Level Indicators
      - 5.1.3.1 Float Switches
      - 5.1.3.2 Floats with Guide Tube
      - 5.1.3.3 Tilting Float Level Switch
      - 5.1.3.4 Floats with Magnetostrictive Transmitters
      - 5.1.3.5 Bypass Level Indicator
      - 5.1.3.6 Applications of Level Transmitters and Level Switches
    - 5.1.4 Displacer-Type Level Gauge
    - 5.1.5 Electromechanical Level Transmitters
    - 5.1.6 Vibrating Level Switches
      - 5.1.6.1 Principle and Design of Vibrating Level Switches
      - 5.1.6.2 Applications of Vibrating Level Switches
      - 5.1.6.3 Installation of Vibrating Level Sensors
    - 5.1.7 Paddle Level Switches
  - 5.2 Hydrostatic Level Transmitters
    - 5.2.1 Connection of Hydrostatic Pressure Transmitters
      - 5.2.1.1 Level Measurement in Open Vessels
      - 5.2.1.2 Level Measurement in Closed Vessels
      - 5.2.1.3 Measurement with Diaphragm Seals
      - 5.2.1.4 Measurement with Submersible Probe
      - 5.2.1.5 Bubbler Level Measurement
    - 5.2.2 Properties and Applications of Hydrostatic Level Transmitters
  - 5.3 Electrical Level Gauges

- 5.3.1 Conductivity Level Sensors and Switches
- 5.3.2 Capacitive Level Transmitters and Switches
  - 5.3.2.1 Principle of Capacitive Level Sensor
  - 5.3.2.2 Properties of the Process Medium
  - 5.3.2.3 Electrodes of Capacitive Sensors
  - 5.3.2.4 Placement of Electrodes in the Technological Apparatuses
  - 5.3.2.5 Evaluation Electronic Circuits
  - 5.3.2.6 Applications of Capacitive Level Transmitters and Level Switches
- 5.4 Thermal Level Switches
- 5.5 Optical Level Sensors
  - 5.5.1 Transmission-Type Detectors
  - 5.5.2 Reflection-Type Detectors
  - 5.5.3 Refraction-Type Detectors
- 5.6 Ultrasonic Level Measurement
  - 5.6.1 Properties of Ultrasound
  - 5.6.2 Principles of Ultrasonic Level Gauges
    - 5.6.2.1 Continuous Ultrasonic Level Transmitters
    - 5.6.2.2 Ultrasonic Level Switches
  - 5.6.3 Installation of Ultrasonic Level Gauges
  - 5.6.4 Applications of Ultrasonic Level Gauges
  - 5.6.5 3D Solids Scanner
- 5.7 Radar Level Gauges
  - 5.7.1 Permittivity and Microwave Radiation
  - 5.7.2 Non-Contact Radar Level Gauges
    - 5.7.2.1 Pulse Radar
    - 5.7.2.2 Radar with Frequency Modulated Carrier Wave (FMCW)
    - 5.7.2.3 Antenna Designs
    - 5.7.2.4 Installation of Radar Level Gauges
  - 5.7.3 Guided Wave Radar Level Gauges
  - 5.7.4 Applications of the Radar Level Gauges
- 5.8 Radiation Level Gauges
  - 5.8.1 Radioactive Sources and Radiation Detectors}
  - 5.8.2 Applications of the Radiation Level Gauges
- 5.9 Selection of the Level Sensor
- 6 Flow Measurement (Karel Kadlec)**
  - 6.1 Terms and Definitions
  - 6.2 Classification of Flow Sensors
  - 6.3 Positive Displacement Meters
  - 6.4 Velocity Flowmeters
    - 6.4.1 Differential Pressure Flowmeters
      - 6.4.1.1 Speed Probes
      - 6.4.1.2 Differential Pressure Flowmeters with Primary Elements
      - 6.4.1.3 Capillary (Laminar) Flowmeter
    - 6.4.2 Variable Area Flowmeters - Rotameters
      - 6.4.2.1 Principle of Operation
      - 6.4.2.2 Dependence on Density and Viscosity
      - 6.4.2.3 The Design of the Flowmeter
      - 6.4.2.4 Installation of Variable-Area Flowmeters
      - 6.4.2.5 Features of Variable Area Flowmeters
      - 6.4.2.6 Application of Variable-Area Flowmeters
    - 6.4.3 Spring-Loaded Variable Area Flowmeters and Target (Paddle) Flowmeters
    - 6.4.4 Turbine and Paddlewheel Flowmeters
    - 6.4.5 Electromagnetic Flowmeters
      - 6.4.5.1 Principle of Electromagnetic Flowmeter

- 6.4.5.2 Design of Electromagnetic Flowmeter
- 6.4.5.3 Influence of the Medium on the Measurement Results
- 6.4.5.4 Properties of Electromagnetic Flowmeter
- 6.4.5.5 Application of Electromagnetic Flowmeters
- 6.4.6 Ultrasonic Flowmeters
  - 6.4.6.1 Classification of Ultrasonic Flowmeters
  - 6.4.6.2 Transit-Time Ultrasonic Flowmeters
  - 6.4.6.3 Doppler Ultrasonic Flowmeters
  - 6.4.6.4 Flowmeters with In-Line and Clamp-on Ultrasonic Transducers
  - 6.4.6.5 Ultrasonic Multi-Beam Flowmeters
  - 6.4.6.6 Properties of Ultrasonic Flowmeters
  - 6.4.6.7 Applications of Ultrasonic Flowmeters
- 6.4.7 Vortex Flowmeters
  - 6.4.7.1 Principle of Vortex Flowmeter
  - 6.4.7.2 Design of Vortex Flowmeters
  - 6.4.7.3 Properties of Vortex Flowmeters
  - 6.4.7.4 Application of Vortex Flowmeters
- 6.5 Open Channel Flow Measurement
  - 6.5.1 Weirs in Flow Measurement
  - 6.5.2 Parshall Flume
  - 6.5.3 Alternative Sensors for Flow Rate Measurement in Open Channels
- 6.6 Mass Flowmeters
  - 6.6.1 Mass Flow Measurement Methods
    - 6.6.2 Coriolis Mass Flowmeters
      - 6.6.2.1 Principle of Coriolis Flowmeter
      - 6.6.2.2 Measuring Tubes
      - 6.6.2.3 Electronic Control and Evaluation Circuits
      - 6.6.2.4 Properties and Applications of Coriolis Flowmeters
    - 6.6.3 Thermal Mass Flowmeters
      - 6.6.3.1 Dispersion Mass Flowmeters (Thermal Anemometer)
      - 6.6.3.2 Calorimetric Thermal Mass Flowmeter
  - 6.7 Calibration of Flowmeters
  - 6.8 Selection of a Suitable Flowmeter
- 7 Heat Measurement** (*Karel Kadlec*)
  - 7.1 Principle of Heat Meters
  - 7.2 Measurement of Heat Transferred by Liquid Medium
  - 7.3 Measurement of Heat Transferred by Steam
  - 7.4 Application of Heat Meters
- 8 Measurement of Weight – Industrial Scales** (*Michal Mikulec, Karel Kadlec*)
  - 8.1 Weighing Accuracy
  - 8.2 Load Cells
  - 8.3 Discontinuous Scales
    - 8.3.1 Platform Scales
    - 8.3.2 Tank and Hopper Scales
    - 8.3.3 Roller Conveyor Scales
    - 8.3.4 Vehicle Weighing Scales (Weighbridges)
      - 8.3.4.1 Road Vehicle Scales
      - 8.3.4.2 Rail Scales and Weighbridges
      - 8.3.4.3 Electronic Evaluation Units in Scales
      - 8.3.4.4 Software for Vehicle Weighing Scales
  - 8.4 Continuous Scales
    - 8.4.1 Belt Scales
    - 8.4.2 Solids Flowmeters with Chute or Impact Plate
    - 8.4.3 Coriolis Type Solids Flowmeters

- 8.4.4 Evaluation Units for Continuous Weighing
- 8.5 Continuous Dosing
  - 8.5.1 Weigh Belt Feeders
  - 8.5.2 Differential Dosing Scales – Loss-in-Weight Feeders
  - 8.5.3 Evaluation and Control Systems for Dosing Scales
- 9 Humidity and Moisture Measurement** (*Dušan Kopecký, Karel Kadlec*)
  - 9.1 Humidity Parameters
  - 9.2 Humidity Measurement in Gases
    - 9.2.1 Psychrometric Hygrometers
    - 9.2.2 Sorption hygrometers
      - 9.2.2.1 Mechanical Hygrometers
      - 9.2.2.2 Resistive Hygrometers
      - 9.2.2.3 Capacitive Hygrometers
      - 9.2.2.4 Piezoelectric Hygrometers
    - 9.2.3 Dew-Point Hygrometers (Chilled-Mirror Hygrometers)
    - 9.2.4 Coulometric Electrolytic Hygrometer
    - 9.2.5 Infrared and Microwave Hygrometers
  - 9.3 Moisture Measurement in Solids
    - 9.3.1 Chemical Methods
    - 9.3.2 Gravimetric Methods
    - 9.3.3 Methods using a Measurement of Electrical Quantities
      - 9.3.3.1 Resistive (Impedance) Techniques
      - 9.3.3.2 Capacitance (Dielectric) Techniques
    - 9.3.4 Spectrometric Methods
      - 9.3.4.1 Infrared Absorption and Reflection
      - 9.3.4.2 Microwave Moisture Analyser
    - 9.3.5 Nuclear Magnetic Resonance
    - 9.3.6 Fast Neutron Moderation
    - 9.3.7 Time Domain Reflectometry
  - 9.4 Application of Moisture and Humidity Analysers
- 10 Composition Measurement** (*Tomáš Bartovský, Karel Kadlec, Pavel Kadlec*)
  - 10.1 Introduction into Analysers
    - 10.1.1 Functional Principles of Automatic Analysers
    - 10.1.2 Characteristic Properties of Automatic Analysers
  - 10.2 Measurement of Liquid Mixtures Composition
    - 10.2.1 Sensors of Liquid Density
      - 10.2.1.1 Hydrostatic Density Meters
      - 10.2.1.2 Ultrasonic Density Meters
      - 10.2.1.3 Vibration Density Meters
      - 10.2.1.4 Combined Density and Sound Velocity Sensors
      - 10.2.1.5 Radiation Density Meters
      - 10.2.1.6 Microwave Density Meters
      - 10.2.1.7 Density Meters Based on Other Principles
      - 10.2.1.8 Applicability of Density Meters
    - 10.2.2 Optical Sensors
      - 10.2.2.1 Refractometer Sensors
      - 10.2.2.2 Turbidimeters and Nephelometers
      - 10.2.2.3 Polarimeters
      - 10.2.2.4 Dissolved Oxygen Optical Sensor
    - 10.2.3 Infrared Liquid Analysers
      - 10.2.3.1 Fourier Transform Near-Infrared Spectrometers
      - 10.2.3.2 Instruments Based on Attenuated Total Reflectance Infrared Spectroscopy
  - 10.2.4 Viscosity Sensors
    - 10.2.4.1 Viscosity – The Internal Friction in Fluids

- 10.2.4.2 Viscometers
- 10.2.5 Electrolytic Conductivity Sensors of Liquids
  - 10.2.5.1 Theoretical Background
  - 10.2.5.2 The Cell Constant
  - 10.2.5.3 Measurement Methods and Design of Conductivity Sensors
  - 10.2.5.4 Applicability of Inductive Conductivity Sensors
- 10.2.6 Electrochemical Sensors
  - 10.2.6.1 Amperometric Sensors
  - 10.2.6.2 Potentiometric Sensors
  - 10.2.6.3 Semiconductor pH Sensors
  - 10.2.6.4 Oxidation-Reduction Potential (ORP) Sensors
- 10.3 Measurement of Gas Mixtures Composition
  - 10.3.1 Thermal-Conductivity Analysers
    - 10.3.1.1 Thermal Conductivity
    - 10.3.1.2 Thermal Conductivity of Gas Mixtures
    - 10.3.1.3 Measuring Method
    - 10.3.1.4 Electrical Connection and Influence of Supply Current
    - 10.3.1.5 Sample Replacement
    - 10.3.1.6 Examples of Thermal Conductivity Analysers
  - 10.3.2 Analysers with Catalytic Combustion Sensors
    - 10.3.2.1 Function Principle
    - 10.3.2.2 Pellistor Sensors
    - 10.3.2.3 Examples of Pellistor Sensor Analysers
    - 10.3.2.4 Applications of Pellistor Sensor Analysers
  - 10.3.3 Analysers with Semiconductor Sensors
    - 10.3.3.1 Principle of Semiconductor Sensors
    - 10.3.3.2 Sensor Design
    - 10.3.3.3 Applications of Semiconductor Sensors
  - 10.3.4 Photometric Analysers
    - 10.3.4.1 Principles of Photometric Analysers
    - 10.3.4.2 UV Absorption Analysers
    - 10.3.4.3 Infrared Analysers
    - 10.3.4.4 Fluorescence Analysers
    - 10.3.4.5 Chemiluminescence Analysers
  - 10.3.5 Magnetic Analysers
    - 10.3.5.1 Magnetic Properties of Materials
    - 10.3.5.2 Methods of Measurements
    - 10.3.5.3 Applications of Magnetic Analysers
  - 10.3.6 Analysers with a Photoionization Detector (PID)
  - 10.3.7 Electrochemical Gas Sensors
    - 10.3.7.1 Amperometric Sensors
    - 10.3.7.2 Potentiometric Sensors
  - 10.3.8 Process Gas Chromatographs
    - 10.3.8.1 Measurement Principle and Basic Components of Chromatographs
    - 10.3.8.2 Chromatographic Column
    - 10.3.8.3 Detectors
    - 10.3.8.4 Sample Injection
    - 10.3.8.5 Oven
    - 10.3.8.6 Carrier Gas
    - 10.3.8.7 Analysis Evaluation
    - 10.3.8.8 Examples of Process Chromatographs
- 10.4 Sampling and Sample Treatment for Automatic Analysers
  - 10.4.1 Sampling and Gas Sample Treatment
    - 10.4.1.1 Gas Sampling
    - 10.4.1.2 Gas Sample Transport

- 10.4.1.3 Removal of Mechanical Impurities from Gas
- 10.4.1.4 Gas Sample Treatment
- 10.4.1.5 Disposal of Gas Samples
- 10.4.2 Sampling and Treatment of Liquid
  - 10.4.2.1 Liquid Sampling
  - 10.4.2.2 Liquid Sample Transport
  - 10.4.2.3 Removal of Mechanical Impurities from Liquid
  - 10.4.2.4 Removal of Gases from Liquids
  - 10.4.2.5 Adjustment of Pressure and Temperature
  - 10.4.2.6 Disposal of Liquid Samples
- 10.5 Measurement of Solids in Gas
  - 10.5.1 Gravimetric Methods and Beta-Attenuation Particulate Monitoring
  - 10.5.2 Optical Methods
  - 10.5.3 Sampling
- 10.6 Colour Measurement
  - 10.6.1 Principles of Colour Theory
  - 10.6.2 Basic Quantities and Equations Used in Spectrophotometry
  - 10.6.3 Colour Detection and LED Analysers
    - 10.6.3.1 Inline Colour Measurement System ColorCONTROL ACS7000
    - 10.6.3.2 Universal Colour Sensors with Optical Fibre
    - 10.6.3.3 Sensors with Integrated Optics for Special Surfaces
  - 10.6.4 Water Colour Measurement with the SIGRIST *ColorPlus* Absorption Photometer
  - 10.6.5 Food Colour Fast Control
  - 10.6.6 Real-Time Colour Measurement in Food Applications
  - 10.6.7 Real-Time Measurement of Sugar Colour
- 11 Sizing of Particles, Pores and Porous Materials** (*Jiří Štětina, Evžen Šárka, Tereza Uhlířová, Eva Gregorová, Willi Pabst, Zdeněk Bubník*)
  - 11.1 Particle Size Measurement
    - 11.1.1 Laser Diffraction Particle Sizing
  - 11.2 Measurement of Porosity and Pore Sizes in Materials
  - 11.3 Image Analysis
    - 11.3.1 Principle of Image Analysis
    - 11.3.2 Image Analysis in Particle Size Distribution Measurements
    - 11.3.3 Application of Image Analysis for Assessment of Porosity and Pore Size of Materials

Subject Index Volume I

## Volume II Process Control

### Part III Process Control

- 12 Short Review of Selected Terms** (*Miloš Kmínek*)
  - 12.1 The System and Its Description
  - 12.2 Variables
  - 12.3 Basic Relations
    - 12.3.1 Transfer of Heat and Mass
    - 12.3.2 Kinetics of Chemical Reactions
    - 12.3.3 Heat Changes during Chemical Reactions
    - 12.3.4 Kinetics of Biotechnological Processes
    - 12.3.5 Physicochemical Properties of Water
- 13 Mathematical Models** (*Miloš Kmínek*)
  - 13.1 Inductive Mathematical Models in General
  - 13.2 Deductive Mathematical Models in General

- 13.3 Deductive Model Creation Based on Balances
  - 13.3.1 Example 1 – Mathematical Model of Heater
  - 13.3.2 Example 2 – Mathematical Model of Fermentation
- 14 Simulating the Solution to Mathematical Model Equations** (*Miloš Kmínek*)
  - 14.1 Principle of Stepping Methods of Solution to Ordinary Differential Equations
  - 14.2 Solution to Sample Tasks
    - 14.2.1 Example 1 – Heater Simulation
    - 14.2.2 Example 2 – Fermentation simulation
- 15 Introduction to Production Process Control** (*Miloš Kmínek*)
  - 15.1 Basic Concepts
  - 15.2 Controlled System
    - 15.2.1 What We Need to Know about the Controlled System
    - 15.2.2 Classification of Controlled Systems According to Their Dynamic Behaviour
    - 15.2.3 Static Characteristic of System
    - 15.2.4 System Stability
  - 15.3 Measuring Element
  - 15.4 Actuator
    - 15.4.1 General Properties of Actuators
    - 15.4.2 Control Valves and Butterfly Valves
    - 15.4.3 Pumps as Control Devices
  - 15.5 Continuous Control
    - 15.5.1 Continuous Controller Structure and Functions
    - 15.5.2 Control Process, Control Quality
    - 15.5.3 Selecting the Controller Type
    - 15.5.4 Practical Procedures for Setting Controller Parameters
      - 15.5.4.1 Methods for Setting the Controller for a Static System
      - 15.5.4.2 Methods for Setting the Controller for Astatic Systems
      - 15.5.4.3 Controllers with Two Degrees of Freedom
      - 15.5.4.4 Principles of Intuitive Tuning of Controller Parameters
    - 15.5.5 Branched Control Circuits
    - 15.5.6 Example 3 – Simulation of a Simple Control Loop
  - 15.6 Two-Position and Three-Position Controls
  - 15.7 Digital Control
    - 15.7.1 Digital Signal Processing
    - 15.7.2 Digital Controllers
    - 15.7.3 Adaptive Control
    - 15.7.4 Automatic Setting of PID Controllers (auto-tuning)
    - 15.7.5 Nonlinear System Control
    - 15.7.6 Compact Controllers
- 16 Logic Control** (*Iva Nachtigalová, Miloš Kmínek*)
  - 16.1 Mathematical Principles of Logic Control
    - 16.1.1 Basic Logic Functions
    - 16.1.2 Methods for Defining Logic Functions
    - 16.1.3 Converting Logic Function Definitions into an Algebraic Expression
    - 16.1.4 Minimization of Logic Functions
  - 16.2 Logic Control Types
    - 16.2.1 Combinatory Logic Circuits
      - 16.2.1.1 Design Procedure
      - 16.2.1.2 Example 4 – Combinatory Logic Circuit
    - 16.2.2 Sequential Logic Circuits
      - 16.2.2.1 Bistable Flip-Flop Circuits
      - 16.2.2.2 Sequential Function Chart (SFC)
      - 16.2.2.3 Design Procedure

- 16.2.2.4 Example 5 – Sequential Logic Circuit
- 16.3 Logic Control Implementation
- 16.3.1 Programmable Logic Controllers (PLCs)
  - 16.3.1.1 Internal Structure and Traditional Design
  - 16.3.1.2 Unconventional Designs
  - 16.3.1.3 Operating Modes and Execution of the User Program
  - 16.3.1.4 Performance
  - 16.3.1.5 Programming
  - 16.3.1.6 Example 6 – Developing User Program for PLC
- 17 Batch Process Control in Industrial Practice** (*Vlastimil Braun*)
  - 17.1 Introduction to Batch Production
  - 17.2 Standards for Batch Production Control
  - 17.3 Batch Production Control
    - 17.3.1 Controlling Manufacture of More Products
    - 17.3.2 Controlling Production along More Technological Lines
    - 17.3.3 Batch System for Batch Production Control (Example)
  - 17.4 IT Functions in Batch Production
    - 17.4.1 Production Planning, Allocation and Control
    - 17.4.2 Human Resource Control
    - 17.4.3 Technological Process Data Acquisition, Analysis and Archiving
    - 17.4.4 Production Data Acquisition and Processing
    - 17.4.5 Supervisory Production Management
    - 17.4.6 Material Management
    - 17.4.7 Process Optimization
    - 17.4.8 Quality Management
    - 17.4.9 Production Records, Protocols and Documentation
    - 17.4.10 Equipment Performance Statistics
    - 17.4.11 Maintenance Management Support
- 18 Computer Control and Information Systems** (*Miloš Kmínek et al.*)
  - 18.1 Structure of Modern Computer Control Systems
  - 18.2 Function and Benefits of Computer Control
  - 18.3 Control Computer Structure and Operation
    - 18.3.1 PAC Structure and Working
    - 18.3.2 Industrial PC Structure and Operation
  - 18.4 Communication with Operator
    - 18.4.1 Communication with Operator – Basic Functions
    - 18.4.2 Communication with Operator – Structure
    - 18.4.3 Communication with Operator – Contents
    - 18.4.4 Communication with Operator – Programming
    - 18.4.5 Graphic Design Principles of Window Contents
    - 18.4.6 Situational Awareness
  - 18.5 Safety of Technological Computer Process Control
    - 18.5.1 Safety of the Technological Process
    - 18.5.2 Control System Reliability
    - 18.5.3 Safety of Control System Installation
  - 18.6 Computer Control System Design and Implementation
  - 18.7 Examples of Process Control Systems and Their Architecture
    - 18.7.1 Siemens Systems of Control (*Vlastimil Braun*)
    - 18.7.2 TECO Systems of Control (*Jaromír Klaban*)
- 19 Modern Methods of Control** (*Miloš Kmínek, Jaromír Kukul, Pavel Hrnčířík, Jan Mareš*)
  - 19.1 Fuzzy Sets in Control
    - 19.1.1 Basic Terms and Operations
    - 19.1.2 Fuzzification

- 19.1.3 Fuzzy Rules
- 19.1.4 Defuzzification
- 19.1.5 Using Fuzzy Approach in Process Control
- 19.1.6 Fuzzy Control
- 19.1.7 Synthesis of Fuzzy Controller with Two Inputs – Example
- 19.2 Artificial Neural Networks (ANN)
- 19.2.1 ANN Concept
- 19.2.2 General Three-Layer ANN Model
- 19.2.3 Multi-Layer Perceptron
- 19.2.4 Radial Basis Function (RBF)
- 19.2.5 ANN Is a Versatile Approximation
- 19.2.6 Competitive Models of the Same Structure
- 19.2.7 ANN Learning Methods
- 19.2.8 Applicability of ANN to Process Control
- 19.3 Knowledge Based Control
- 19.3.1 Direct Knowledge-Based Control Systems
- 19.3.2 Supervisory Knowledge-Based Control Systems
- 19.3.3 Knowledge-Based Control at the Laboratory Scale
- 19.3.4 Knowledge-Based Control in Industrial Practice
- 19.4 Predictive Control
- 19.4.1 Generalized Predictive Control (GPC)
- 19.4.2 Purposeful Function
- 19.4.3 Purposeful Function Minimisation
- 19.4.4 Obtaining a Predictive Model Using the Inverse Matrix Method
- 19.4.5 Control Algorithm

## **20 Computer Simulation of Chemical, Food Industrial and other Production Operations** (*Jiří Hloska*)

- 20.1 Automation of Industrial Operations
- 20.1.1 Discrete Simulation
- 20.1.2 Simulation of Food Industrial Operations Using SW Plant Simulation and the Brewing Library
- 20.2 Simulation Models of Food Industrial Operations
- 20.3 Simulation of Brewery Operation – Example
- 20.4 Future Development
- 20.5 Conclusion

## **Part IV Laboratory and Industrial Applications of Process Measurement and Control**

### **21 Measurement and Control of Model and Laboratory Stations**

#### **21.1 Control of Pilot Brewery at UCT Prague** (*Miloš Kmínek, Iva Nachtigalová, Pavel Dostálek*)

- 21.1.1 Introduction
- 21.1.2 Beer Brewing Technology in General
  - 21.1.2.1 Mashing-in and Addition of Hot Water
  - 21.1.2.2 Mashing
  - 21.1.2.3 Lautering and Sparging
  - 21.1.2.4 Wort Boiling
  - 21.1.2.5 Cooling
  - 21.1.2.6 Fermentation and Maturation
  - 21.1.2.7 Brewing Technology at the Pilot Brewery UCT Prague
- 21.1.3 Control System
- 21.1.4 Control Algorithms
- 21.1.5 Visualisation

- 21.1.6 Use of the Unit
- 21.2 Automation of Micromaltery, UCT Prague** (*Miloš Kmínek, Pavel Dostálek*)
  - 21.2.1 Introduction
  - 21.2.2 Malting Technology
    - 21.2.2.1 Steeping
    - 21.2.2.2 Germination
    - 21.2.2.3 Kilning
- 21.3 Laboratory Film Evaporator** (*Miloš Kmínek*)
  - 21.3.1 Description of Evaporator Station
  - 21.3.2 Process Control
  - 21.3.3 Utilization
- 21.4 Continuous Chromatographic Separation** (*Svatopluk Henke, Simona Gillarová*)
  - 21.4.1 Basic Characteristics of the KCHS-SMB-8-ND Station
  - 21.4.2 Description of Continuous Chromatographic Separation
  - 21.4.3 Control
  - 21.4.4 Applications
- 21.5 Membrane Separation** (*Svatopluk Henke, Andrea Hinková, Simona Gillarová*)
  - 21.5.1 Principle of Membrane Separation
  - 21.5.2 Process Control
  - 21.5.3 Applications
- 21.6 Bioprocess Control Laboratory** (*Jan Náhlík, †Jaroslav Vovsík*)
  - 21.6.1 Biotechnological Processes
  - 21.6.2 Bioprocess Control
  - 21.6.3 Instrumentation Equipment
  - 21.6.4 Control System
  - 21.6.5 Communication with the Operator
  - 21.6.6 Control Algorithms
    - 21.6.6.1 Software Sensors
    - 21.6.6.2 Classification of Metabolic States
    - 21.6.6.3 Control
  - 21.6.7 Conclusion
- 21.7 Design of Mechanically Stirred Bioreactors and Exploitation of Control Software for Aerobic Cultivation of Microbial Cells** (*Leona Paulová, Karel Schmiedberger Jr., Tony Allman, Mojmír Rychtera, Miloš Kmínek*)
  - 21.7.1 Introduction
  - 21.7.2 Description of Construction of Mechanically Stirred Bioreactor, Its Control System and Data Collection for Aerobic Microbial Processes
  - 21.7.3 Using Mechanically Stirred Bioreactor and Its Control System for Production of Recombinant Proteins Using *Pichia pastoris* Host System – Practical Example
  - 21.7.4 Example of Controlled Cultivation of the Yeast Culture of *Saccharomyces cerevisiae*
  - 21.7.5 Conclusion
- 21.8 Multifunctional Process Measurement and Control Teaching System** (*Karel Kadlec*)
  - 21.8.1 Introduction
  - 21.8.2 Technical Description of the System
  - 21.8.3 Computer Control of the Multifunction Station
  - 21.8.4 Multifunction System Properties
  - 21.8.5 Summary
- 21.9 Stations for Teaching Measurement and Control of Process Variables** (*Karel Kadlec*)
  - 21.9.1 Introduction
  - 21.9.2 Description of Teaching Stations
    - 21.9.2.1 Level Measurement and Control

- 21.9.2.2 Flow Measurement and Control
- 21.9.2.3 Pressure Measurement and Control
- 21.9.2.4 Temperature Measurement and Control
- 21.9.3 Control Software
- 21.9.4 Laboratory Tasks
- 21.10 Teaching Stations for Advanced Control of Multivariable Systems and a Mobile Measurement and Control Teaching Station** (*Iva Nachtigalová*)
  - 21.10.1 Introduction
  - 21.10.2 Stations for Advanced Control of Multivariable Systems
    - 21.10.2.1 Vacuum Degassing (Level/Pressure System)
    - 21.10.2.2 Continuous Stirred Tank with Indirect Heating (Level/Temperature System)
  - 21.10.3 Mobile Station for Level Measurement and Control
- 21.11 Continuous Homogenisation, Pasteurisation and Sterilisation** (*Jiří Štětina*)
  - 21.11.1 Basic Description of the Technology
  - 21.11.2 Description of Equipment and Process Control of Pasteurisation
  - 21.11.3 Applications
- 21.12 Demonstration of Image Analysis Applications in the Food Industry** (*Anna Korbářová*)
  - 21.12.1 Surface Defect Finding
  - 21.12.2 Recognition, Position Finding, Counting
  - 21.12.3 Tolerance Measurement and Checking
  - 21.12.4 Colour and Shape Identification
  - 21.12.5 Text and Code Reading and Verification
  - 21.12.6 *LabVIEW* Application Including Image Processing
- 21.13 Characterization of Ceramic Materials via Image Analysis** (*Tereza Uhlířová, Jan Hostaša, Eva Gregorová, Willi Pabst*)
  - 21.13.1 Dense and Porous Ceramics
  - 21.13.2 Microscopic Image Analysis of Dense YAG Ceramics for Laser Applications
  - 21.13.3 Microscopic Image Analysis of Porous Alumina and Mullite Ceramics for High-Temperature Thermal Insulation
  - 21.13.4 Summary and Conclusion
- 21.14 Microscopic Analysis of Cement Clinker** (*Jan Macháček, František Škvára*)
  - 21.14.1 Cement Production
  - 21.14.2 Clinker Microscopy and Image Analysis
- 21.15 Flowmeter Calibration Using Mobile Calibration Pathway** (*Jaroslav Čadil*)
  - 21.15.1 Flowmeter Calibration Methods
    - 21.15.1.1 Volumetric Method
    - 21.15.1.2 Gravimetric Method
  - 21.15.2 Effects Influencing Calibration Results
  - 21.15.3 Measurement Uncertainties in Flowmeter Calibration
- 22 Applications of Measurement and Control in Food Technology and Biotechnology**
  - 22.1 Automatically Controlled Grain Mill** (*Miloš Kmínek, Josef Příhoda, Pavel Skřivan, Karel Kadlec*)
    - 22.1.1 Fundamentals of Grain Mill Technology
    - 22.1.2 Extraction Rate Based System
    - 22.1.3 Grain Mill Control Principles
    - 22.1.4 Grain Cleaning Using *Sortex*
  - 22.2 Regulation and Control of Production in Industrial Bakery** (*Miloš Kmínek, Josef Příhoda*)
    - 22.2.1 Production Technology in Industrial Bakeries
    - 22.2.2 Production Line Control

- 22.3 Use of Vacuum Cooling to Control the Production of Baker's Goods** (*Petr Čadil, †Jiří Holas, Kurt Spirig, Miloš Kmínek*)
  - 22.3.1 Technologies to Make Baker's Goods Production More Efficient
  - 22.3.2 Vacuum Cooling Control
- 22.4 Production Control of Deep Frozen Bakery Products** (*Miloš Kmínek, Marcela Sluková*)
  - 22.4.1 Processing Technology of Deep-Frozen Bakery Products
    - 22.4.1.1 Dough Preparation
    - 22.4.1.2 Baking
    - 22.4.1.3 Shock Freezing of Shaped Bakery
  - 22.4.2 Production Line Control
- 22.5 Automation of Lautering in Breweries** (*Miloš Kmínek, Pavel Dostálek*)
  - 22.5.1 Introduction
  - 22.5.2 Technology of Wort Separation (Lautering) and Extraction of Spent Grain (Sparging)
  - 22.5.3 Control of Lautering and Sparging
- 22.6 Smoking Process Control** (*Miloš Kmínek, Petr Pipek*)
  - 22.6.1 Smoking Methods
  - 22.6.2 Smoker Design
  - 22.6.3 Smoking Process Control
- 22.7 Milk Evaporation and Drying Process Control** (*Miloš Kmínek, Ladislav Čurda*)
  - 22.7.1 Description of Technology
  - 22.7.2 Process Control
    - 22.7.2.1 Evaporator Control
    - 22.7.2.2 Dryer Control
- 22.8 Full Automation of Edible Oil Refinery** (*Ivo Kunc, Roman Brázda, Vladimír Filip, Miloš Kmínek*)
  - 22.8.1 General Description of Edible Oil Refining Technology
    - 22.8.1.1 Bleaching for Physical Refining
    - 22.8.1.2 Physical Refining (Deodorisation)
    - 22.8.1.3 Winterization – Oil Dewaxing
  - 22.8.2 COMPAS – Architecture of Olomouc Refinery Control System
  - 22.8.3 Description of Bleaching Process Control
- 22.9 Controlling the Hydrolysis of Fats** (*Miloš Kmínek, Vladimír Filip*)
  - 22.9.1 Description of Technology
    - 22.9.1.1 Fat Splitting
  - 22.9.2 Process Control
- 22.10 Extractor Control – Control with Distributed Parameters** (*Miloš Kmínek, Pavel Kadlec, Vladimír Ulrich*)
  - 22.10.1 Juice Extraction Technology
  - 22.10.2 Extractor Control
- 22.11 Controlling Masecuite Boiling in Vacuum Pans** (*Miloš Kmínek, Pavel Kadlec, Vladimír Ulrich*)
  - 22.11.1 Masecuite Boiling Technology
  - 22.11.2 Masecuite Boiling Control
- 22.12 On-line monitoring of crystal growth and sugar colour using image processing technique** (*Bertrand Gaillac, Claire Rua*)
  - 22.12.1 Introduction
  - 22.12.2 Crystal Growth inside the Crystallizers
  - 22.12.3 Colour Measurement at the Centrifuge Outlets
- 22.13 Fruit Storage under Controlled Atmospheric Conditions** (*Miloš Kmínek, Rudolf Ševčík, Aleš Rajchl*)

- 22.13.1 Fruit Post Harvest Storage
- 22.13.2 Facility for Storing Apples under Controlled Atmosphere
- 22.14 Fermentation Process Control in the Tereos TTD, a.s., Distillery Dobrovice** (*Miloš Kmínek, Mojmír Rychtera, Václav Černý*)
  - 22.14.1 Fermentation Technology
  - 22.14.2 Fermentation Process Control
- 22.15 Fermentation Process Control at LONZA Biotec s.r.o.** (*Aleš Nesrsta, Vlastimil Braun, Mojmír Rychtera, Miroslava Čikošová, Zdena Čermáková*)
  - 22.15.1 General Introduction to a Fermentation Process Run at LONZA Biotec s.r.o.
  - 22.15.2 Biotechnology Process Control System and Its Architecture
  - 22.15.3 Example of Model Unit (Feed Tank) Control
    - 22.15.3.1 Examples of Operations
    - 22.15.3.2 Implementation of Production Operations – Stages
  - 22.15.4 Summary
- 22.16 DeltaV Control System in Pharmaceutical Production** (*Jan Dostál*)
  - 22.16.1 DeltaV Distributed Control System
    - 22.16.1.1 System General Description and Development
    - 22.16.1.2 Application Areas
    - 22.16.1.3 Syncade – Smart Operation Control
  - 22.16.2 DeltaV Distributed Control System in Pharmaceutical Production
  - 22.16.3 Modern Trends of Control – Human-Centred Design
- 22.17 Controlling the Process of Municipal Wastewater Biological Treatment on a Laboratory and Industrial Scale** (*Jan Bartáček, Jiří Wanner*)
  - 22.17.1 Basic Principles of Biological Wastewater Treatment
    - 22.17.1.1 Main Contaminants of Municipal Wastewater
    - 22.17.1.2 Biological Wastewater Treatment
  - 22.17.2 Mathematical Modelling of Biological Wastewater Treatment
  - 22.17.3 Basic Principles of Process Control
    - 22.17.3.1 Aeration or Air Supply
    - 22.17.3.2 Activated Sludge Age and Concentration
    - 22.17.3.3 Internal Recycling
    - 22.17.3.4 External Substrate Dosing
  - 22.17.4 Examples of Laboratory Model Control
    - 22.17.4.1 Nitrification Process Control in SBR
    - 22.17.4.2 Controlling Anaerobic Membrane Bioreactor
  - 22.17.5 Measurement and Control of Industrial Activated Sludge Systems
    - 22.17.5.1 Measuring Basic Operating Parameters in Situ
    - 22.17.5.2 Control of Modern Activated Sludge Systems
- 22.18 Online Monitoring of Food/Food Material Quality Parameters** (*Ivan Teper, Filip Teper, René Bien*)
  - 22.18.1 Introduction
  - 22.18.2 Most Widely Used Technologies
    - 22.18.2.1 NIR Technique
    - 22.18.2.2 Microwaves
    - 22.18.2.3 Refractometry and Density Measurements
- 22.19 Management of Quality Control, Health and Safety in Food Production and Distribution** (*Rudolf Ševčík, Aleš Rajchl, Jana Coufalová, Pavel Kadlec*)
  - 22.19.1 Food Quality and Health Safety Control Systems
  - 22.19.2 Digital Systems for Control Management
  - 22.19.3 Requirements for Measuring Technology Used for Monitoring Food Quality and Health Safety
  - 22.19.4 Measurement Technology Made by Testo s.r.o.

- 22.19.4.1 Thermometers
- 22.19.4.2 pH meters
- 22.19.4.3 Fryer Oil Tester
- 22.19.4.4 Dataloggers
- 22.19.4.5 Measured Data Monitoring System/Radio Datalogger System

**22.20 Using Dataloggers for Process and Equipment Validation** (*Jan Svoboda*)

- 22.20.1 *E-val Pro* Wired Thermal Validation System
- 22.20.2 Wireless Dataloggers of *TrackSense Pro Product Line*

**22.21 Simatic S7-1500 Controls the Most Modern Czech Bakery** (*Johana Hrabalová*)

- 22.21.1 Introductio
- 22.21.2 Production of Sourdough Bread and Small Bakery Products
- 22.21.3 Industrial Bakery and Inventory Control
- 22.21.4 Fermentation Technology Control
- 22.21.5 Control of Kneading
- 22.21.6 Control of Dough Shaping, Baking and Dispatch
- 22.21.7 Conclusion

**23 Application of Measurement and Control in Chemical and Other Productions**

**23.1 Rectification Column Control** (*Josef Pašek*)

- 23.1.1 What Is Rectification and What Equipment Is Used for It
  - 23.1.1.1 What Is It – Rectification?
  - 23.1.1.2 Plate Columns vs. Packed Columns
  - 23.1.1.3 Rectification Efficiency and Theoretical Stage
  - 23.1.1.4 Designing Rectification Columns
- 23.1.2 Control of Rectification Columns
  - 23.1.2.1 Standard Equipment of a Rectification Column
  - 23.1.2.2 Principles of Continuous Column Control
  - 23.1.2.3 Control of Pressure in Columns
  - 23.1.2.4 Rectification with Partial Vapour Condensation
  - 23.1.2.5 Column Control at a Very Low Proportion of Distillation Residue
  - 23.1.2.6 Control of Rectification Column of Indistinct Temperature Profile
  - 23.1.2.7 Control of a Continuous Vacuum Rectification Column – Specification
  - 23.1.2.8 Control of Batch Rectification Column
  - 23.1.2.9 Continuous Rectification of a Mixture Using a Series of Columns

**23.2 Evaporator with Mechanical Vapour Recompression** (*Josef Pašek*)

- 23.2.1 Introduction
- 23.2.2 Control of Evaporator with Waste Water Recompression by Turboblower

**23.3 Computer System Controlled Laboratory Rectification Column** (*František Hovorka*)

- 23.3.1 Rectification Column Description
- 23.3.2 Rectification Column Control System
- 23.3.3 Column Operation at Total Reflux Ratio

**23.4 Synthesis of Butyl Acetate by Reactive Distillation** (*Jiří Hanika, Jiří Kolena, Miloš Kmínek*)

- 23.4.1 Principle of Reactive Distillation
- 23.4.2 Description of Butyl Acetate Production Technology
- 23.4.3 Process Control

**23.5 Thymol Hydrogenation in Continuous Trickle Bed Reactor** (*Jiří Hanika, Jozef Dudáš, Miloš Kmínek*)

- 23.5.1 Principle of Thymol Hydrogenation in Continuous Trickle Bed Reactor
- 23.5.2 Description of Thymol Hydrogenation Technology
- 23.5.3 Process Control

- 23.6 Laboratory Unit for Catalytic Hydrogenation of Petroleum Middle Distillates and Alternative Raw Materials** (*Daniel Maxa*)
  - 23.6.1 Basic Description of Hydrotreating Technology
  - 23.6.2 Basic Strategy of Process Control
- 23.7 Propylene Oxidation Feed Control in Acrylic Acid Production** (*Jan Nájemník*)
  - 23.7.1 Description of Acrylic Acid Production Technology
  - 23.7.2 Process Control Strategy
  - 23.7.3 Description of Reactor Feed Preparation Control
- 23.8 Production of Lime Saltpeter** (*František Hovorka, Martin Hubička*)
  - 23.8.1 Introduction
  - 23.8.2 Measurement and Control in the Lime Saltpeter Production Plant
    - 23.8.2.1 Measurement of Operating Parameters
    - 23.8.2.2 Lime Saltpeter Production Control
    - 23.8.2.3 Granulate Cooling Control
- 23.9 Bisphenol A Production** (*Jiří Karásek, František Hovorka*)
  - 23.9.1 Introduction
  - 23.9.2 Technology Description
    - 23.9.2.1 Synthesis
    - 23.9.2.2 Rectification
    - 23.9.2.3 Absolutization
    - 23.9.2.4 Granulation (Flaking)
  - 23.9.3 Production Control
- 23.10 Controlling the Process of Tablet Production by Coating** (*Aleš Kovařík, Jindřich Kubíček, Vlastimil Braun*)
  - 23.10.1 Tablet Coating Technology
    - 23.10.1.1 Coating Machine (Coater)
    - 23.10.1.2 Production of Coated Tablets
    - 23.10.1.3 Processes of Tablet Coating Formation Using Film Forming Substances
  - 23.10.2 Process Control System of Coater Coating Machine
    - 23.10.2.1 Electric Equipment
    - 23.10.2.2 Production Automation and Control
    - 23.10.2.3 Designing a Coating Machine Control System
- 23.11 Lyophilisation Process Control** (*Ladislav Čurda, Petr Grund*)
  - 23.11.1 Principle of Freeze Drying
    - 23.11.1.1 Particular Stages of the Lyophilisation Process
    - 23.11.1.2 Freeze-Drying Equipment
    - 23.11.1.3 Measurement and Sensors in Freeze-Drying Process
  - 23.11.2 Freeze-Drying Control in Ingredia s.r.o. (Example)
  - 23.11.3 Freeze-Drying Applications, Pros and Cons
- 23.12 Measurement and Control of the Water – Aniline Interface Using a Guided Wave Radar Level Gauge** (*Petr Komp, Radim Frömmer*)
  - 23.12.1 Measurement Principle
  - 23.12.2 Typical Applications
  - 23.12.3 Special Application: Measurement of Water-Aniline Interface
  - 23.12.4 Controlling the Position of the Water-Aniline Interface
- 23.13 Using Thermography to Study Power Density Fields in All-Electric Glass Melting Tank Furnaces** (*Stanislav Kasa, Antonín Lisý*)
  - 23.13.1 Glass Melting in All-Electric Tank Furnaces
  - 23.13.2 Determining Power Densities among Electrodes in the Furnace Melting Tank
    - 23.13.2.1 Mathematical Model of Power Density Distribution in the Furnace Melting Tank
    - 23.13.2.2 Physical Models of Power Density Distribution in the Furnace Melting Tank

- 23.13.2.3 Application of Thermography for Determining the Temperature Distribution and Power Densities between Electrodes in the Furnace Melting Tank Model
- 23.13.3 Conclusion
- 23.14 Flat Glass Production Using FLOAT Technology** (*Vlastimil Hotař, František Novotný*)
  - 23.14.1 Flat Glass Production
  - 23.14.2 FLOAT Technology
  - 23.14.3 Flat Glass Processing and Treatment
  - 23.14.4 Measuring Technological Parameters
    - 23.14.4.1 Temperature Measurement
    - 23.14.4.2 Surface Height Measurements
    - 23.14.4.3 Glass Thickness Measurement
    - 23.14.4.4 Inspection of Glass Quality
    - 23.14.4.5 Other Sensors
  - 23.14.5 Production Process Control
- 23.15 Production of Plastic Films by Slot-Die Extrusion** (*Antonín Kuta*)
  - 23.15.1 Cast Film Extrusion Technology
  - 23.15.2 Contactless Measurement of Film Thickness
  - 23.15.3 Process Control
- 23.16 Controlling the Tyre Compound Mixing Process** (*Jiří Brejcha, Miloš Kmínek*)
  - 23.16.1 Introduction – Tyre Manufacturing
  - 23.16.2 Compounding and Mixing
  - 23.16.3 Mixing Process Control
    - 23.16.3.1 Raw Material Weighing and Dosing Control
    - 23.16.3.2 Control of Operating Parameters of Banbury Mixer in Operation
- 23.17 Control System for Plasma Spraying Technology (Plasma Torch)** (*Václav Březina, Miloš Kmínek*)
  - 23.17.1 Plasma Torch
    - 23.17.1.1 Technology of Hybrid Stabilized Arc
    - 23.17.1.2 System Basic Components
  - 23.17.2 Control Unit
  - 23.17.3 Control Principles
    - 23.17.3.1 Controlling the Torch Water System
- 23.18 Controlled Heat Transfer Station Using CHP Units in a Local Distribution Network of Power and Heat** (*Petr Machač*)
  - 23.18.1 CHP Units
  - 23.18.2 Description of Technology
  - 23.18.3 Controlling Operation of Heat Transfer Station
    - 23.18.3.1 Heat Delivery Control Mode
    - 23.18.3.2 Summer Control Mode
    - 23.18.3.3 Winter Control Mode
    - 23.18.3.4 Heat Delivery + Summer Control Mode
    - 23.18.3.5 Heat Delivery + Winter Control Mode
- 23.19 Instrumentation for Energy Monitoring** (*David Slepíčka, Karel Kadlec*)
  - 23.19.1 Measurements in Steam Circuits
    - 23.19.1.1 Boiler Room
    - 23.19.1.2 Distribution Network
    - 23.19.1.3 End User
    - 23.19.1.4 Return Condensate Line
    - 23.19.1.5 Fuel, Air and Flue Gases
  - 23.19.2 Compressed Air Measurement Systems
    - 23.19.2.1 Compressor Efficiency
    - 23.19.2.2 System Balancing and Leaks

- 23.19.2.3 Return on Investment Calculation – Example
- 23.19.3 Endress+Hauser Instrumentation
- 23.20 Application of Mass Flowmeters for Fluid Dosage** (*Martin Niederle, Karel Kadlec*)
  - 23.20.1 Accurate Measurement of Gas Quantity and Its Dosage into Chemical Reactors
  - 23.20.2 Aeration of Ice Cream Using a Thermal Mass Flowmeter
  - 23.20.3 Dosing Gases into Bioreactors
  - 23.20.4 Dosing of Additives by Mass Flowmeter
- 23.21 Thermographic aerial inspection of pipelines with unmanned aircraft** (*Jan Sova, Petr Lněnička, Anna Korbářová*)
  - 23.21.1 Introduction
  - 23.21.2 Terminology
  - 23.21.3 Peculiarities of Using an IR Camera with an Unmanned Aircraft
  - 23.21.4 Applications of Aerial Thermography
  - 23.21.5 Legislation Applicable to Unmanned Aircraft Operation
- 23.22 Anton Paar Process Systems in Chemical, Food and Biochemical Industries** (*Karel Voldřich, Jaroslav Pól, Karel Kadlec*)
  - 23.22.1 Density and Concentration
    - 23.22.1.1 Density and Sound Velocity Sensor SPRn
    - 23.22.1.2 Vibrating Densitometers
  - 23.22.2 Viscosity Measurement
    - 23.22.2.1 Viscosity Sensor L–Vis 510
    - 23.22.2.2 SVM™ 3001 Stabinger Viscometer™
  - 23.22.3 Propol Process Polarimeter
  - 23.22.4 Measurement of Dissolved CO<sub>2</sub> in Beverages by the Carbo Sensor
  - 23.22.5 Measurement of Oxygen Concentration in Beverages by Oxy 510 Sensor
- 23.23 Advanced Control Systems for Continuous Industrial Dryers** (*Antonín Lízr*)
  - 23.23.1 Introduction
  - 23.23.2 Conventional Control of Industrial Dryers
  - 23.23.3 Advanced Control Systems of Continuous Industrial Dryers
  - 23.23.4 ACS of Ceramic Granulate Spray Dryer
  - 23.23.5 ACS for Belt Dryer of Kaolin Noodles
  - 23.23.6 ACS for Rotary Dryer for Crushed Bentonite
  - 23.23.7 ACS for Spray Dryer of Powdered Dairy Products
  - 23.23.8 ACS for Belt Dryer of Egg Cartons
  - 23.23.9 ACS Visualisation and Communication System
- 23.24 Integration of Production Control Systems as the Basis for Introducing Industry 4.0** (*Radim Novotný, Miroslav Dub*)
  - 23.24.1 Introduction
  - 23.24.2 Integration of Control Systems
    - 23.24.2.1 Basic Concepts of Integration
    - 23.24.2.2 Integration of Batch and Continuous Process Control Systems
    - 23.24.2.3 Integration Issues of Discrete Process Control Systems
    - 23.24.2.4 Integration Issues of Control Systems of Dedicated Production Equipment
  - 23.24.3 Other Aspects of Integration
    - 23.24.3.1 Aspects of Legislation
    - 23.24.3.2 Customer's Cooperation with Manufacturer and Project Bidding Stage
  - 23.24.4 Conclusion
- 23.25 New Digital Ecosystem, Plantweb, of the Emerson Company** (*Petr Horák*)
  - 23.25.1 Introduction
  - 23.25.2 Emerson Pervasive Sensing™ Strategy
    - 23.25.2.1 Wireless Corrosion Monitoring
    - 23.25.2.2 Monitoring Wireless Medium Voltage Systems

- 23.25.2.3 Wireless Gas Monitoring
- 23.25.2.4 Non-intrusive Wireless Gas Monitoring
- 23.25.2.5 Wireless Power Transducer
- 23.25.2.6 Wireless Pressure Transducers
- 23.25.3 Secure First Mile™ Architecture
- 23.25.4 Plantweb Insight™ Software
- 23.25.5 Plantweb Advisor™ Software
- 23.25.6 Platform AMS ARES™
- 23.25.7 Always Mobile™
- 23.25.8 Connected Services™
